Forecast for Saturday 24 Jun 2023

Weather: Cloudy and rather breezy during the morning, perhaps with occasional outbreaks of rain or drizzle on southern and western upslopes. Turning drier and brighter through the afternoon with winds easing a little and some sunnier spells developing, these likely becoming widespread by late afternoon or early evening. Feeling increasingly warm and humid.

Chance of cloud-free hill tops above 600m: 20% on southern and western upslopes, with 40% in the north and east at first. Improving to 80% by early afternoon, then 95% by mid-late afternoon.

Low Cloud and visibility: Extensive low cloud during the early morning, with bases down to 300-400m mainly in the south and west, but generally 400-600m in the north and east with more breaks. Conditions improving with cloud bases lifting above most summits by early afternoon and breaking with time. Visibility will be generally good, but moderate or poor in rain and drizzle and low cloud during the morning, improving to becoming mostly very good in the afternoon.

Meteorologist's View

Challenging navigation conditions are expected in the early to mid-morning period in the south and west given rather persistent low cloud. Rain or drizzle may also cause slippery underfoot conditions. Late sunshine that develops will still be strong, so adequate sun protection if out in the afternoon is recommended.

Recent rainfall: measured at Malham: altitude 375m

Forecast for Sunday 25 Jun 2023

Weather: Dry and largely sunny through the morning and becoming very warm and humid. Cloud building by early afternoon, perhaps to give the odd locally heavy thunderstorm. A band of heavy, perhaps torrential rain with a risk of embedded thunder moves east across the park in the late afternoon. Drier and brighter by the early evening, though still a risk of isolated showers or thunderstorms. Turning much fresher later.

Maximum wind: Southerly 15-20mph, with gusts 25-30mph. A chance for gusts around 40-50mph in any thundery rain during the afternoon. Winds veering west or southwesterly later.

Chance of cloud-free hill tops above 600m: 95% at first, lowering to 30% in afternoon rain or showers. 80% by early evening.

Low Cloud and visibility: Cloud above summits at first and good or very good visibilities with a slight haze. Extensive cloud to around 400-600m on passage of rain band in the afternoon, especially in the west, deteriorating to poor or locally very poor visibility. Bases lifting later in the afternoon or early evening with occasional scattered or broken base above 600m, with patches below in any showers or thunderstorms and generally very good visibility.

Temperature: **Valleys:** Plus 16 Celsius rising to Plus 26 Celsius during the day.
At 600m: Plus 15 Celsius increasing to Plus 20 Celsius by day, lowering to 12 Celsius by evening.
Freezing level: Above summits.
